Adam Troxell

Full-Stack Engineer | Python · FastAPI · JavaScript/TypeScript · React · Next.js · PostgreSQL

West Fargo, ND (Open to Remote) · (218) 303-7742 · adam@troxellendeavors.com · github.com/adamtxl · linkedin.com/in/adam-troxell1

Summary

Full-stack engineer who built and ran a production multi-tenant IoT platform as the sole engineer: Python/FastAPI services, PostgreSQL/TimescaleDB, MQTT ingestion, a React front end, Docker deployments, and production support. Before moving into hands-on engineering, I spent nine years as the escalation point and engineering liaison for 53 enterprise clients at FBS/Flexmls, a top U.S. MLS software vendor, so I'm comfortable working directly with customers and stakeholders, turning messy requirements into specs, and owning incidents through resolution. I use AI-assisted tooling daily to move faster and stay accountable for what ships.

Technical Skills

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Backend:** FastAPI, REST API design, Pydantic validation, authentication (JWT/session), Node.js, Express
- **Frontend:** React, Next.js, HTML/CSS
- **Data:** PostgreSQL, TimescaleDB, relational data modeling, data pipelines (ingestion, cleansing, validation)
- **Integrations & Messaging:** third-party APIs, webhooks, MQTT event streams, background ingestion, alerting and notification routing
- **DevOps & Cloud:** Docker, Linux, CI/CD, Git/GitHub, Oracle Cloud, Fly.io, Vercel, logging and monitoring, production incident triage
- **AI-Assisted Development:** Claude Code, GitHub Copilot, Cursor, MCP tooling, LLM API integration
- **Product & Process:** stakeholder discovery and scoping, technical specs, Agile/Scrum (CSPO), Jira, documentation and runbooks

Experience

Founding Engineer (Sole Developer) · RJ Energy Solutions · IoT / Energy Monitoring Startup · Jan 2025 - 2026

- Designed and shipped a production multi-tenant platform as the only engineer, owning it from requirements with leadership through architecture, build, deployment, and production support.
- Built Python/FastAPI REST APIs with Pydantic validation, authentication, and tenant data isolation so each commercial customer saw only its own facilities and devices.
- Modeled relational and time-series data in PostgreSQL/TimescaleDB and built an event-driven ingestion pipeline (LoRaWAN, ChirpStack, MQTT) with validation at each stage before data reached customers.
- Built React dashboards and a configurable alerting engine with threshold rules and notification routing.
- Owned production end to end: triaged issues across device, message, API, and database layers using logs and monitoring, isolated root cause, and shipped fixes.
- Ran containerized deployments on Oracle Cloud with Docker, SSL/TLS, and monitoring.

Founder & Full-Stack Engineer · Troxell Endeavors (Web Consultancy) · Remote · 2024 - Present

- Scope, build, deploy, and support applications for business clients in Python, FastAPI, React, Next.js, and Node.js, working directly with non-technical stakeholders from discovery through post-launch fixes.
- Built a video ad generation pipeline integrating LLM APIs with a FastAPI back end and automated FFmpeg processing, replacing a manual production workflow.
- Integrate third-party APIs and LLM services into client tools, validating AI output before it reaches users.

Solutions Manager · FBS / Flexmls · Enterprise MLS / Proptech SaaS · 2014 - 2023

- Escalation point and engineering liaison for 53 enterprise MLS client organizations at a top U.S. MLS vendor (~200 MLS clients), translating customer workflow problems into specs for development teams.
- Diagnosed a high-priority incident where thousands of listings were missing from a major MLS's API feed: verified data in Postman, compared logs against similar feeds, and traced it to a recent code change; the fix shipped within hours.

- Coordinated an overnight platform upgrade for a major MLS; when out-of-order changes across data, database, and third-party integrations broke the launch, rolled back to protect uptime, diagnosed the sequencing failure, and relaunched cleanly the next night.
- Inherited ~500 custom programming requests and cut the backlog under 100 in two years by prioritizing and folding requests into existing product capabilities instead of one-offs.
- Used SQL to investigate client data-quality issues; in the final stretch, did bug-finding work in the codebase on GitHub Enterprise.

Support Escalation Engineer · Microsoft (vendor) · Exchange / Office 365 · 2011 - 2014

- Owned escalated enterprise issues through resolution during the early Office 365 rollout, isolating root cause across server, cloud, and client layers.

Certifications & Education

- Certified Scrum Product Owner (CSPO)
- Full-Stack Software Engineering Program, Prime Digital Academy, 2024 (JavaScript, React, Node.js, SQL)
